PRODUCT FEATURES

1 Superb sound design features newly-developed 40mm aperture driver units

The HDJ-C70s are finely tuned for pro-DJ monitoring. Newly developed 40mm aperture driver units and neodymium magnets deliver outstanding resolution, accurately reproducing deep bass notes and clear low to medium frequencies. A copper cap in the pole piece part inside the unit and a 2,000mW input capacity eliminate distortion, even with the volume cranked up.

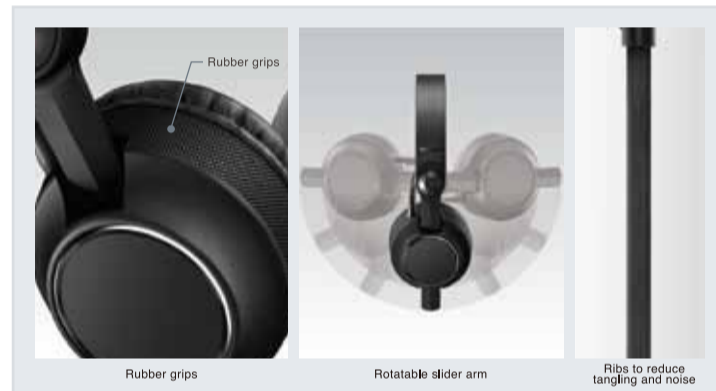

2 Soundproofing component delivers excellent sound isolation

An innovative sound-isolation chamber on the bass reflex port eliminates background noise from inside and outside the booth. Plus, the ear pads use soft leather-type materials for a snug fit to enhance sound insulation.

3 Designed for ultimate comfort and to support various monitoring styles

The HDJ-C70s feature a lightweight, flexible polyamide resin headband and snug fitting ear cups, to ensure comfort even during prolonged use. Both ear cups can be rotated by 90-degrees in either direction, and have rubber grips around the outside – so one-ear monitoring is comfortable and easy whether the headphones are on DJ's head or round their shoulders. Also included are a 1.6m straight cord and 1.0m curled cord (up to 3m long when extended), which can be selected to suit different styles, with fine ribs to reduce tangling and noise from touching.

4 Replaceable parts and a carry case for excellent durability and portability

All the components of the HDJ-C70s are built with the rigours of frequent use in mind. The headphones come with two detachable cords. Plus the headband, housing, head cushion and insert-style ear pads can be replaced to extend the headphone's lifespan when necessary.

Other Functions

- Insert-type ear pads can easily be replaced.
- Cord using detachable MMCX-type connectors.
- Includes carrying pouch for convenient carrying.
